Aluminum or PVC?

How to choose your window frame. A 60 second guide.

Swipe →

The difference

It comes down to the frame.

Both hold glass. The difference is the material around it.

Strong and slim.

Warm and cost efficient.

When aluminum wins

Choose aluminum when...

/01 You want slim sightlines and more glass.

/02 The opening is large or structural.

/03 The look is modern and design led.

Sightline · SlimPatio 68

15/16 in

When PVC wins

Choose PVC when...

/01 Thermal performance is the priority.

/02 The budget needs to work harder.

/03 Low maintenance matters most.

In short

Warm, efficient, easy to live with.

Your turn

Still unsure? Start with the opening.

Large spans and slim frames point to aluminum. Energy and value point to PVC. Size and sightline decide it.

What are you specifying, and why? Tell us in the comments.
