

From double to triple.

Glazing options

What each option changes.

/01 Double glazed

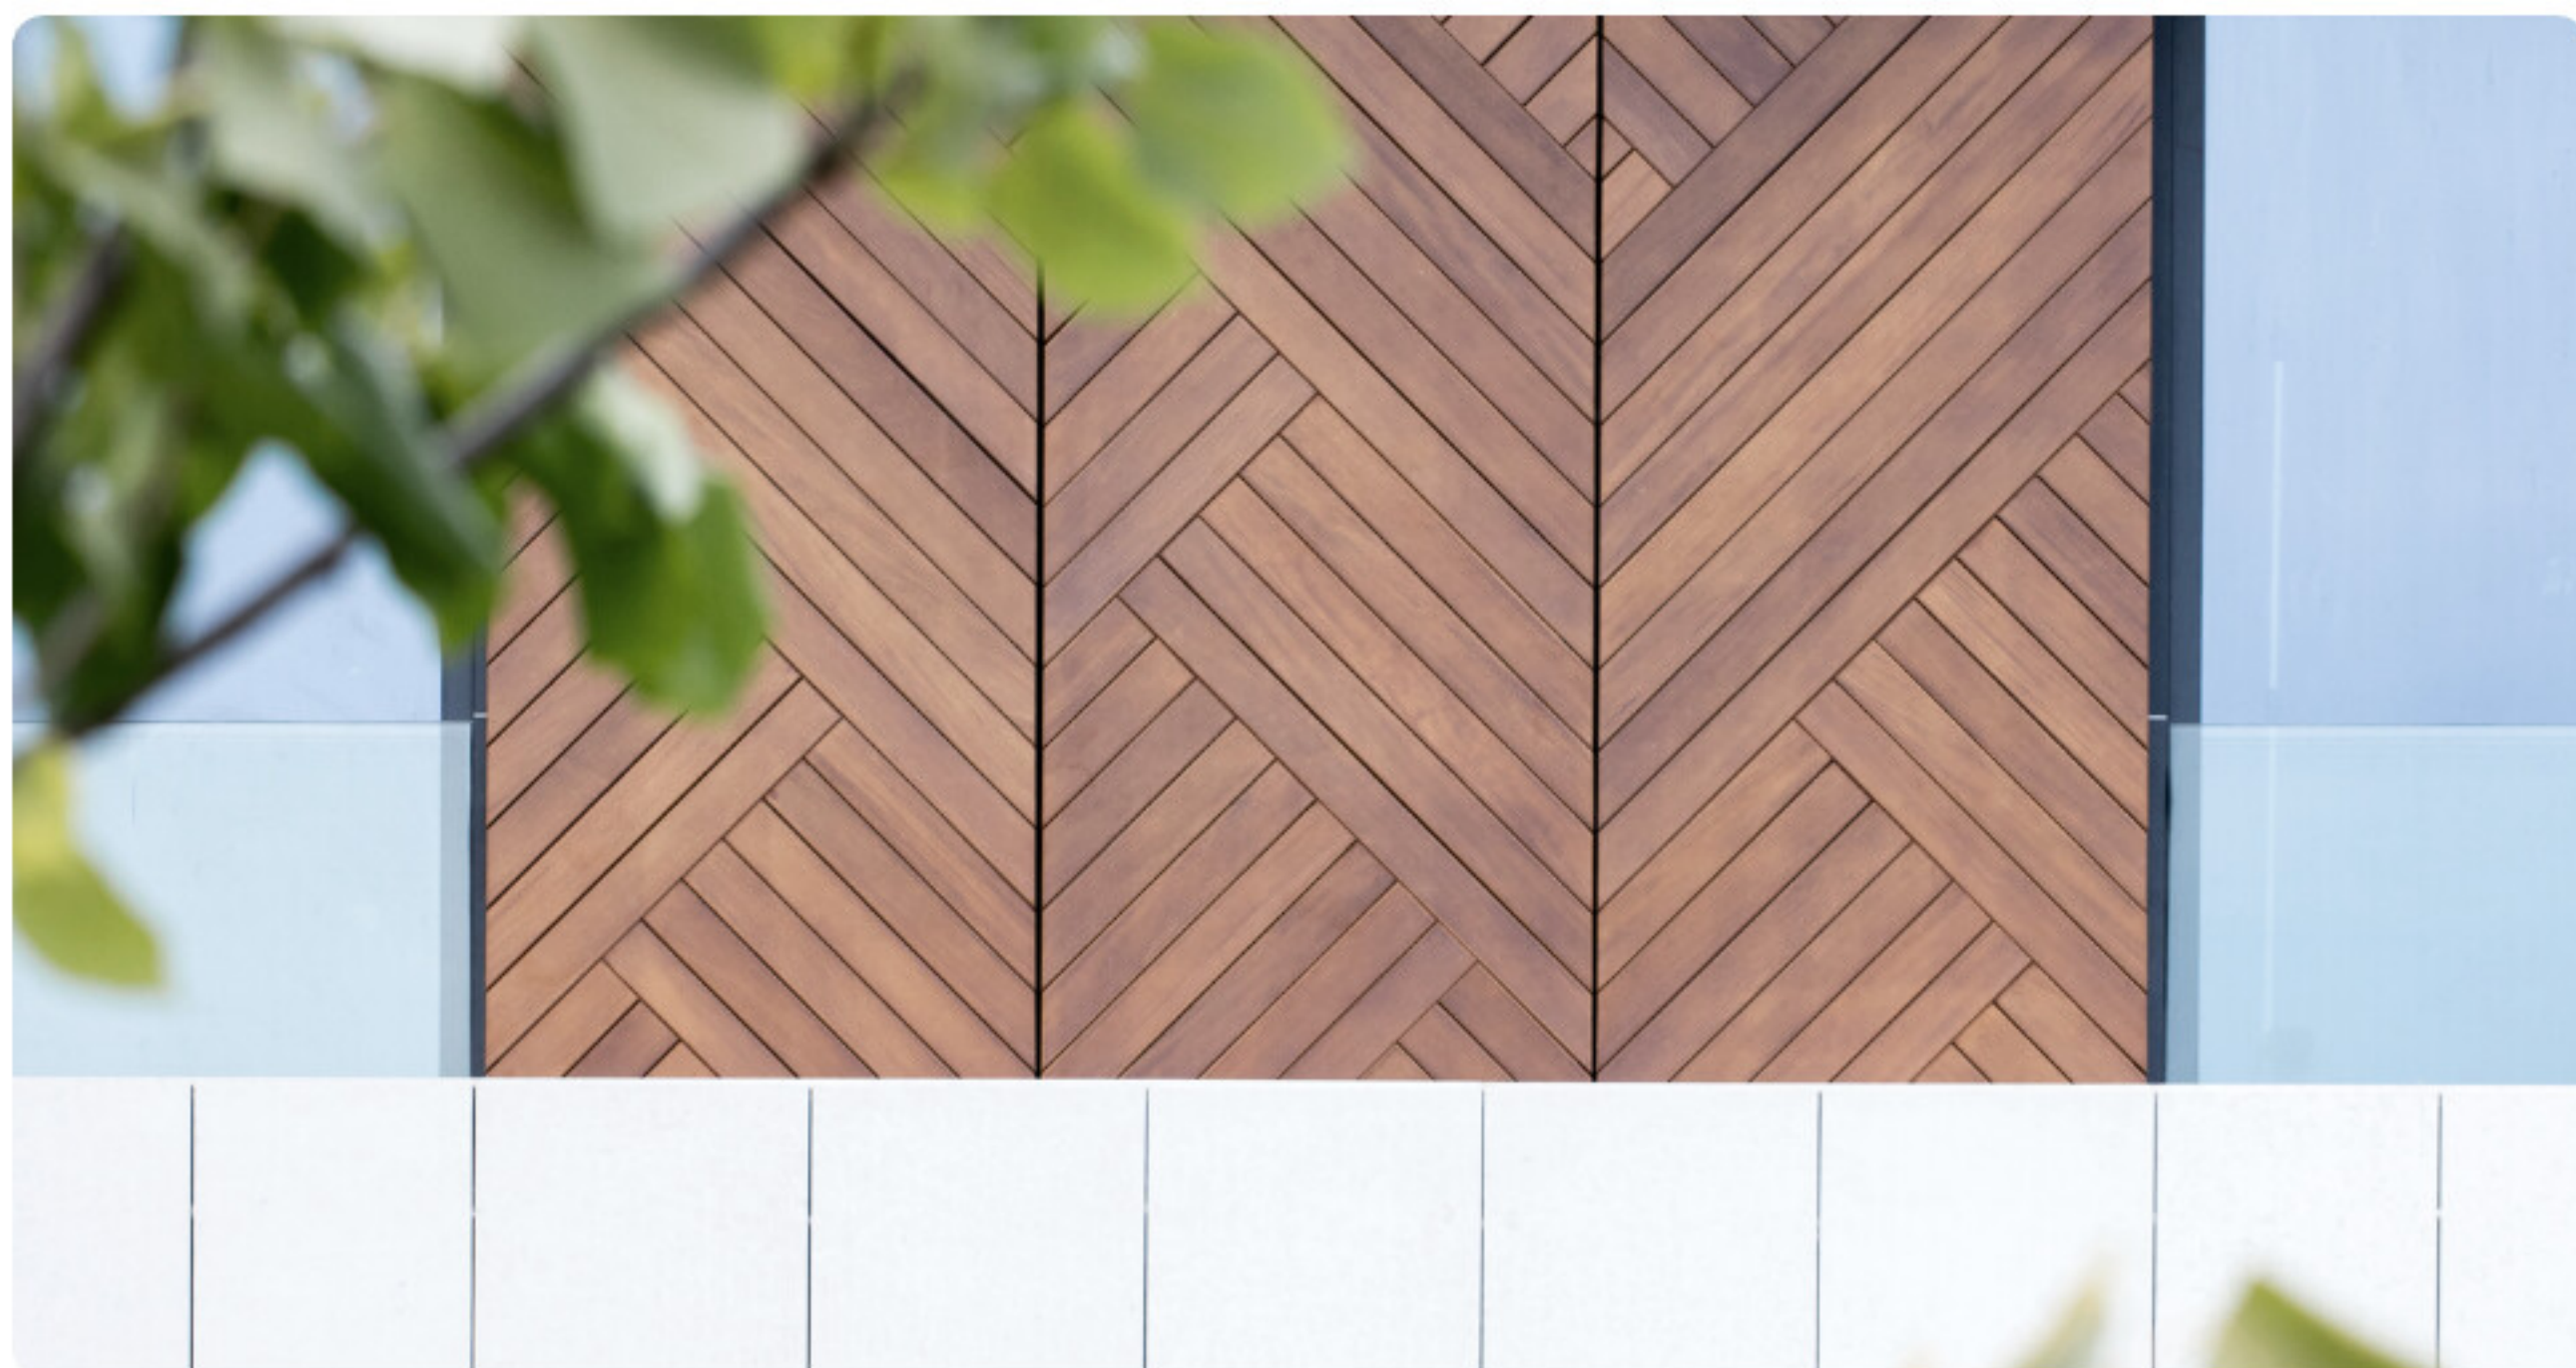

The standard. Good thermal performance at the lowest weight.

/02 Triple glazed

Better U-factor and acoustics. Heavier, needs a deeper frame.

/03 Laminated

A bonded interlayer holds the glass in place. Needed for impact.

Not sure?

Tell us the climate and the noise.

We will recommend the glazing that fits the project, not the most expensive one.

Which glazing do you specify most?
