VALDA

# From double to triple.

Glazing options

# What each option changes.

/01 **Double glazed**

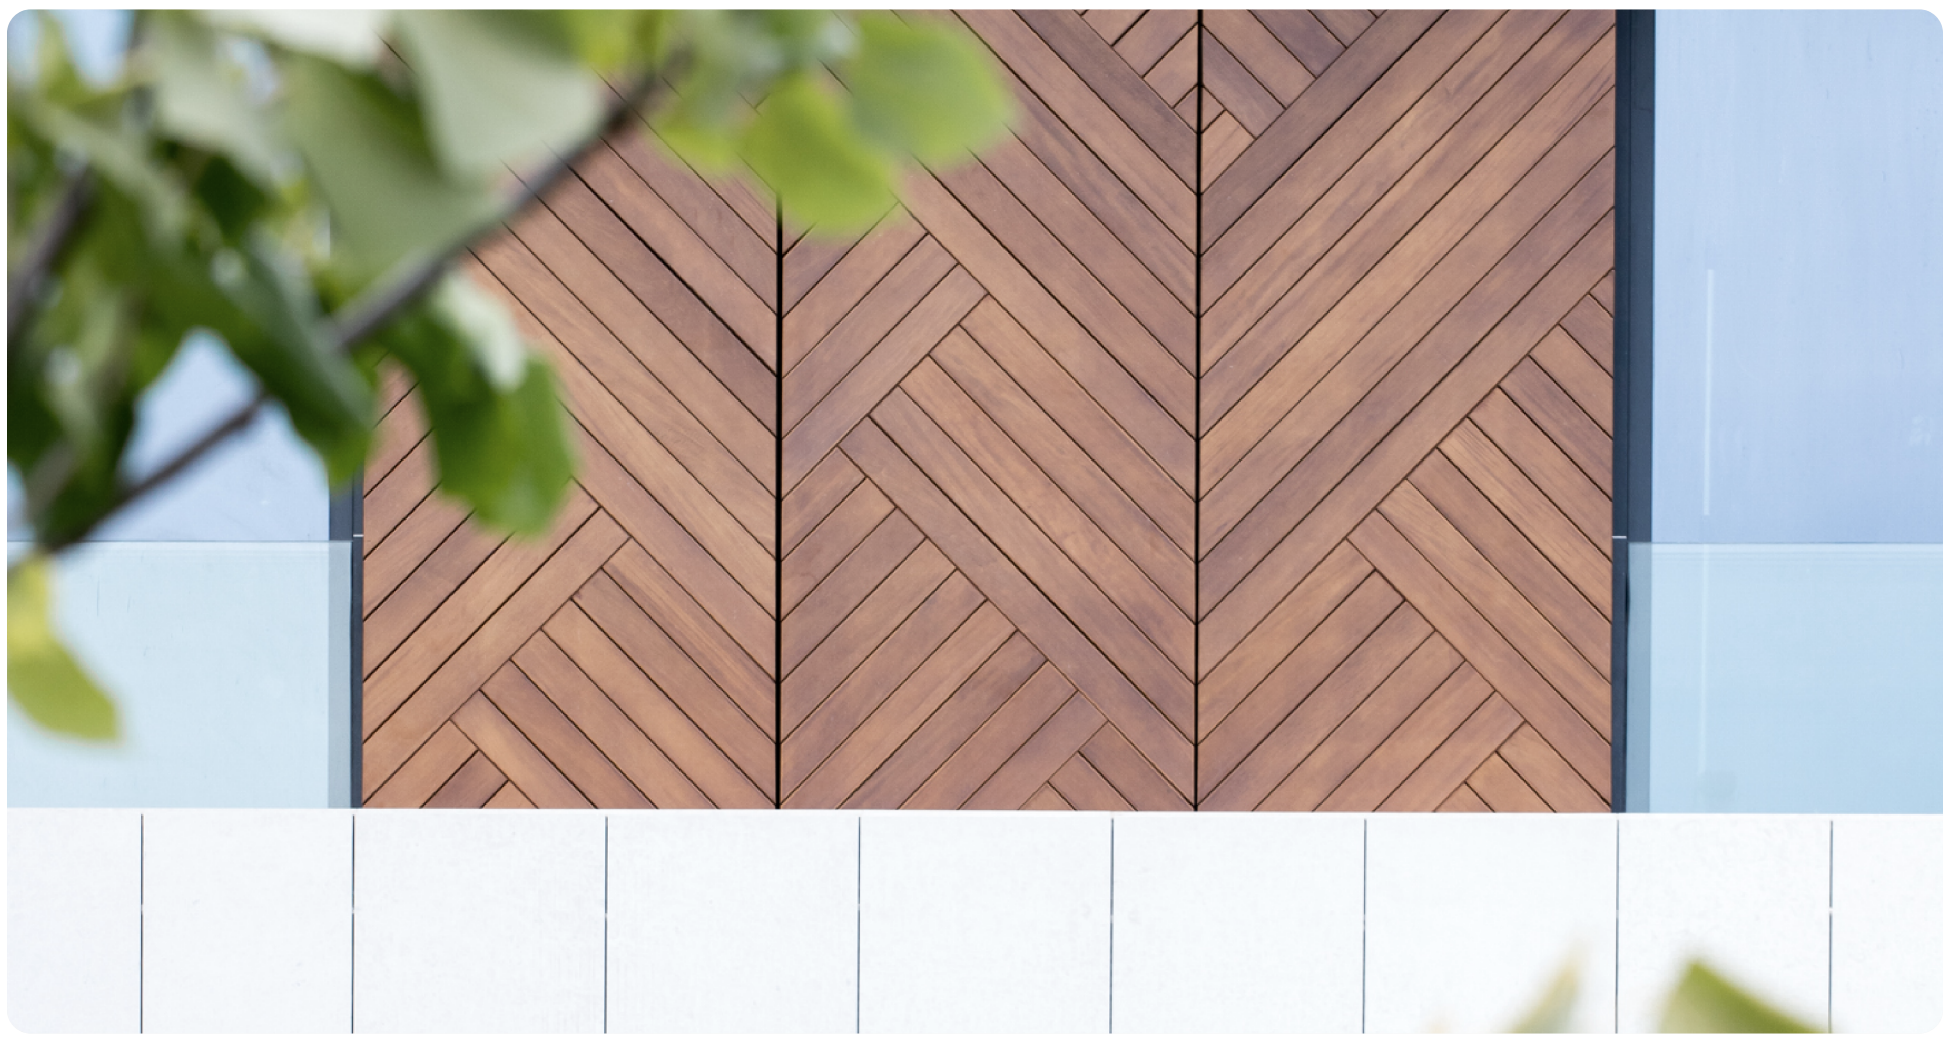

The standard. Good thermal performance at the lowest weight.

/02 **Triple glazed**

Better U-factor and acoustics. Heavier, needs a deeper frame.

/03 **Laminated**

A bonded interlayer holds the glass in place. Needed for impact.

Not sure?

# Tell us the climate and the noise.

We will recommend the glazing that fits the project, not the most expensive one.

Which glazing do you specify most?
