0.14

What U-factor really tells you.

How much heat a window lets through. Lower is better.

Read it right

Whole window, not just the glass.

/01 **Whole-window**

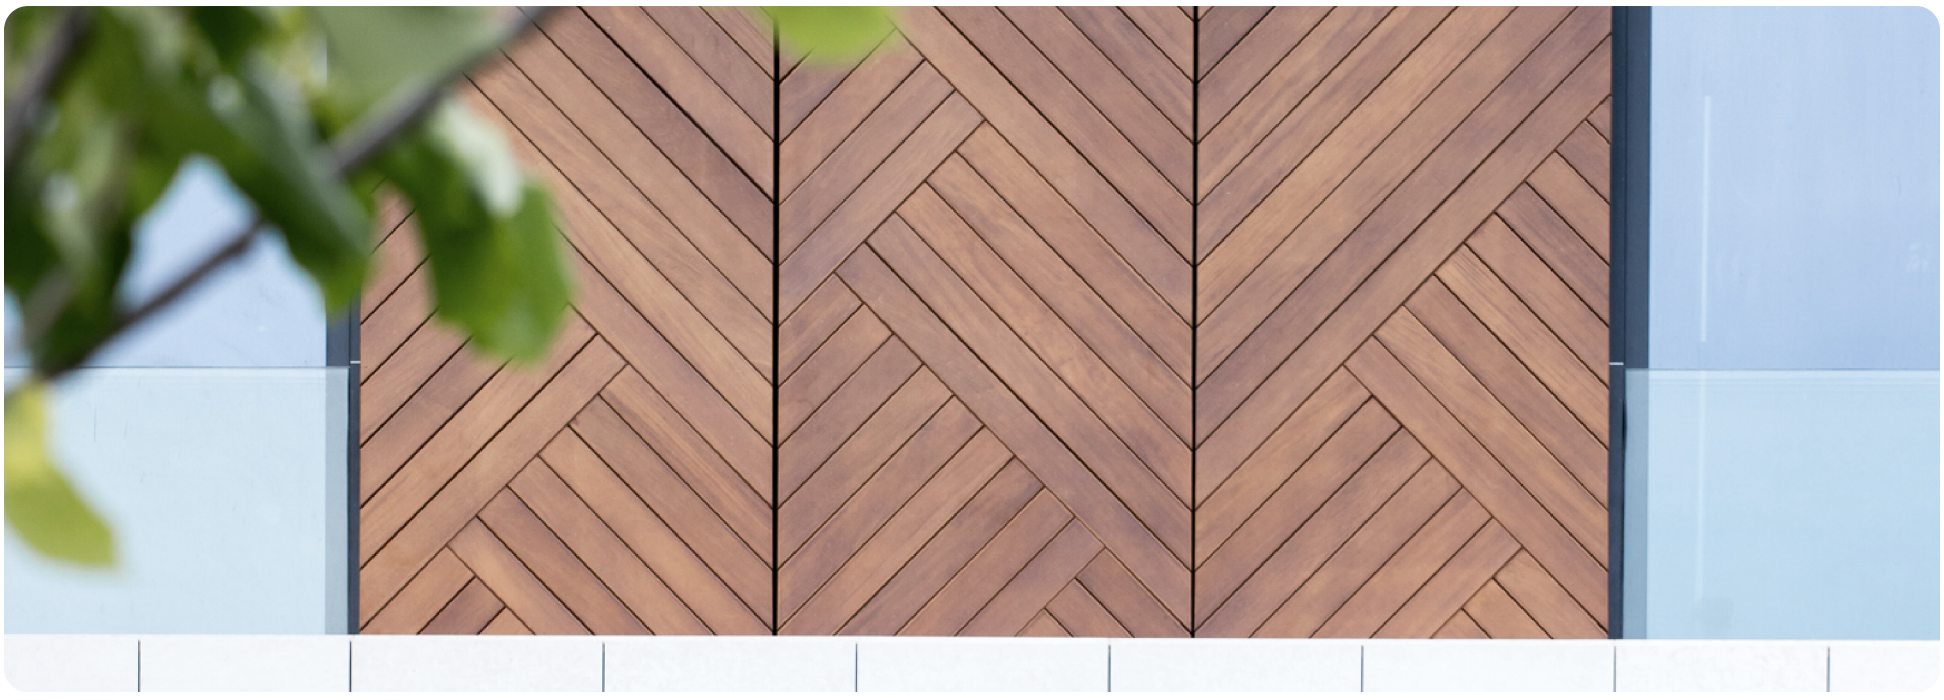

Frame, glass edge and spacer together. The number to compare.

/02 **Center-of-glass**

The middle of the pane only. It always looks better than the window on the wall.

/03 **Lower is better**

0.18 lets through a quarter less heat than 0.24.

Double to triple · Reynaers data

What the third pane does.

ConceptSystem 77 · double to triple glazed

0.24 → 0.18

MasterLine 8

0.23 → 0.16

ConceptWall 50

0.23 → 0.14

MasterLine 10 · triple

0.14

ConceptPatio 155

0.34 → 0.28

Reading a European quote

Uw ÷ 5.678 = U-factor.

/01 **Europe**

Uw, the whole-window value, in W/m²K.

/02 **US**

U-factor, in Btu/hr·ft²·°F.

/03 **Convert**

Divide by 5.678. Same measure, different units.

Example · Uw 1.0 in US units

U-factor 0.18
