

EDUCATIONAL / GLAZING

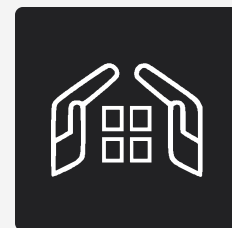

Aluminium or PVC? How to choose your window frame.

A 60 second guide for anyone specifying windows.

It comes down to the frame.

Both hold glass. The difference is the material around it. **Aluminium is strong and slim. PVC is warm and cost efficient.** Everything else follows from that.

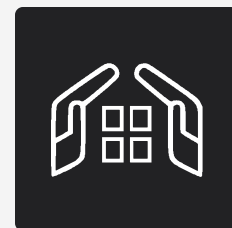

Choose aluminium when...

-
- 01 You want slim sightlines and more glass.
 - 02 The opening is large or structural.
 - 03 The look is modern and design led.
-

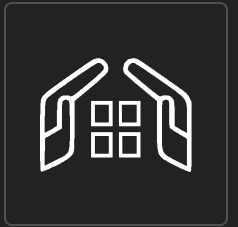

15/16 in

Sightline on the SlimPatio 68
aluminium slider.

Choose PVC when...

-
- 01 Thermal performance is the priority.
 - 02 The budget needs to work harder.
 - 03 Low maintenance matters most.
-

Still unsure? Start with the opening.

Large spans and slim frames point to aluminium. Energy and value point to PVC. Size and sightline decide it.

What are you specifying, and why? Tell us in the comments.
