

WINDOW GLOSSARY

Five numbers on every *window spec.*

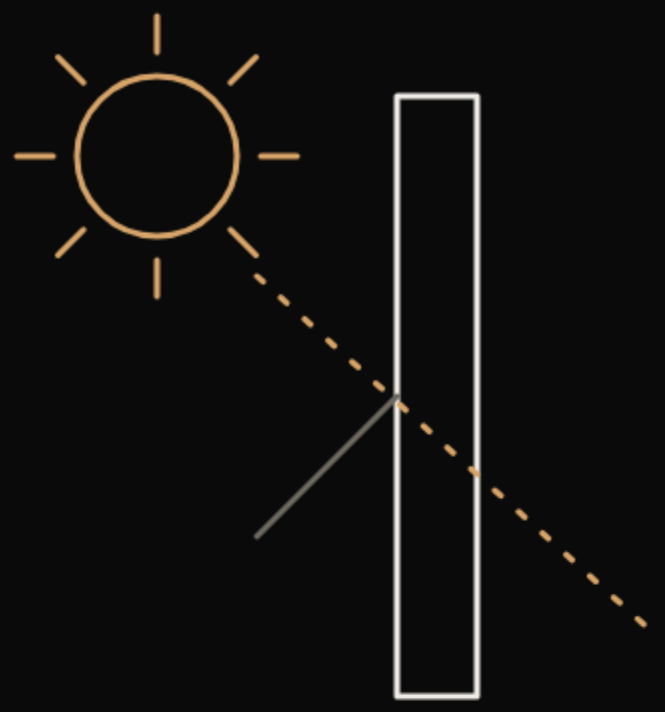

U

U-factor

How much heat passes through the whole window.
Lower is better.

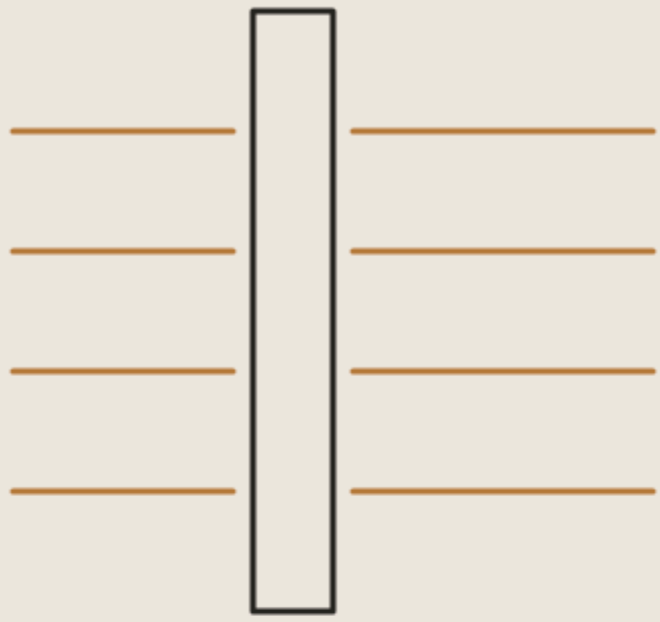

SHGC

Solar heat gain

How much of the sun’s heat gets through, from 0 to 1. Lower keeps a room cooler.

VT

Visible transmittance

How much daylight gets through, from 0 to 1. Higher means brighter rooms.

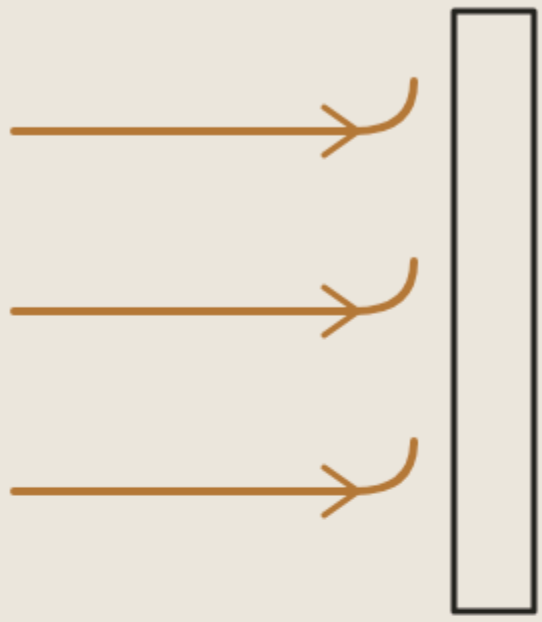

STC

Sound transmission class

How well the window blocks noise. Higher is quieter.

DP

Design pressure

The wind load the window is rated for. Higher means stronger.

Save this for your next *spec.*
